

Pad Printing Supplies

Desktop Film

(#25901) – 100 / 8.5” x 11” Sheets

ITW Imtran desktop film provides printers the ability to produce exceptional quality film positives directly from a desktop ink jet printer. Film output quality is comparable with an image setter, and the process is as easy as document printing. ITW Imtran desktop film has a special coating that allows the ink to penetrate without bleeding. Even the finest details are precisely reproduced.

Also required, and available at most retail office supply stores, is a quality ink jet printer the uses a **DYE** based ink. Printers using pigment based ink systems will not work. Please contact us directly for a list of recommendations.

Basic Instructions:

1. Start your graphics program
2. Acquire or create graphic
3. Print using the following settings;
 - a. Select Mirror image; this places emulsion side down
 - b. Select separations; black only
 - c. Select paper; premium photo glossy
 - d. Select black ink only from printer settings
 - e. Select highest resolution print output
 - f. Load the printer with the ITW Imtran desktop film to image coated (matte) side
 - g. Press apply and print
 - h. Process film and photopolymer plate in the usual manor

Note: The DYE based ink requires a drying time of approximately 1 – 2 minutes prior to handling, be careful not to touch printed graphics during this time.

In addition to the Desktop Art Film, ITW Imtran offers a full line of pad printing supplies including inks, ink additives, pads, printing plates, nesting fixtures, mixing supplies and ink clean up items.
