ITW Imtran introduces 3 color Eco-Slide attachment

Haverhill, MA - January 8, 2007 - ITW Imtran is pleased to announce the introduction of a three color Eco-Slide attachment for use with its GS-200S Pad Transfer Printer. The Eco-Slide, a feature generally used for printing long and narrow graphics by “sliding” the ink cup in a right to left direction, is now three color and/or cup capable. This new attachment allows for the printing of up to three colors, 34” long, by utilizing separate 1.5” diameter Eco-Cups. Using the servo control feature of the GS-200S print head, graphic location can be infinitely adjusted, all the while maintaining registration and print repeatability. As with all ITW Imtran accessories, the Eco-Slide attachment is built for a lifetime of industrial use in the most demanding environments. This attachment joins the standard 1 and 2 color Eco-Slides, available in 22” and 40” lengths, which are options for the GS-100CC, GS-200, and GS-200S series of pad transfer equipment. Please visit www.itwimtran.com for additional information.

About ITW Imtran

ITW Imtran is a domestic manufacturer of product decorating solutions, offering a comprehensive line of standard and custom pad printing equipment, pad printing and hot stamping supplies, and technical services. Now, as part of Illinois Tool Works (NYSE:ITW) Decorating Equipment Group since 2001, ITW Imtran is partnered with leading manufacturers who are innovators in all aspects of product decorating.
